Apple Mac OS X Directory Services v10.5 Exam

9L0-620: Mac OS X Directory Services v10.5 Exam

Practice Exam: 9L0-620 Exams

Exam Number/Code: 9L0-620

Exam Name: Mac OS X Directory Services v10.5 Exam

Questions and Answers: 101 Q&As

(ACPT)

Exam : [9L0-620](#)

For candidates making preparation for the Apple 9L0-620 questions and answers, what they most desire is to easily pass the 9L0-620 (Mac OS X Directory Services v10.5 Exam) exam. ItCertHome 9L0-620 includes 101 questions and answers, which are collected and collated by experts of Apple. With our 9L0-620 study materials, you can successfully take Apple certification of 9L0-620 exam and go further on Apple career path.

Free 9L0-620 Demo

we provide Apple 9L0-620 demo exam for free (in PDF format) before you decide to purchase it. Thus, you can know better about the quality of our practice exam and then make your right decision.

ItCertHome Test tool's advantages:

High Quality and Value of 9L0-620 exam

ItCertHome Apple ACPT 9L0-620 Practice Questions is developed and finished by Apple technical team , cover every field of the exam . Besides, we have verified 9L0-620 answers, almost 100% correct.

100% Guarantee to Pass 9L0-620 Exam

We promise to give you FULL REFUND if you fail the ACPT 9L0-620 certification (Apple Certified Network Associate) with the use of our ItCertHome testing engine.

9L0-620 Self Test Mode

ItCertHome provides a simulated and interactive environment where you can test your knowledge and skills about 9L0-620 to ensure enough assurance in real testing center.

Periodic Updates of ItCertHome 9L0-620

Once there is some change on Apple 9L0-620 exam, we will update it timely, and the product you buy will be updated within 90 days for free.

Professional and Efficient Service

We offer 7*24 customer support via diverse channels: LIVE CHAT, MAIL. Expecting the communication with you about IT certification.

The Questions & Answers cover the latest real test and with all the correct answer. we promise the Q&A for **Apple ACPT 9L0-620** examination of original title complete coverage. ItCertHome **9L0-620 Braindumps** Questions & Answers help you pass the exam. Otherwise, we will give you a full refund.

We promised that use ItCertHome Q&A ensure you pass the exam at your first try.

1. The Q&A are from cooperation exam center of the real original title, summarized by our professional team and collated by senior IT lectured in co-training center to make sure the professional quality of the Q&A. The correctness of the Q&A is 100%, the coverage of 9L0-620 Q&A are more than 96%. All you need to study the whole 9L0-620 Q&A before you participate the certification exam, it should be possible to easily complete the exam and pass the certification.

2. ItCertHome to all the Q&A, we promised "do not pass the exam give you a full refund". If you buy our 9L0-620 Q&A and did not pass the exam at the first try. You can take the examination report card that stamped with PROMETRIC or VUE test centers Seal. we will refund your full cost of 9L0-620 Q&A, absolutely guarantee you interests have no losses.(For a full refund details)

3. ItCertHome professional IT Q&A vendors, we provide well after-sale service. To all the customers buy the Q&A, we provide track service. when you buy the Q&A with in one year. you can enjoy the upgrade Q&A service for free. If in this period, the certified test center change the 9L0-620 Q&A, we will update the Q&A in the first time, and provide you the download update for free.

[Apple 9L0-620](#) Test belongs to one of the ACPT certified test, if needs to obtain the ACPT certificate, you also need to participate in other related test, the details you may visit the ACPT certified topic, in there, you will see all related ACPT certified subject of examination.

9L0-620

ItCertHome professional provide ACPT 9L0-620 the newest Q&A, completely covers 9L0-620 test original topic. With our complete ACPT resources, you will minimize your ACPT cost and be ready to pass your 9L0-620 tests on Your First Try, 100% Money Back Guarantee included!

This 9L0-620 PDF demo do not include the questions and answers's picture:

Exam : Apple 9L0-620

Title : Mac OS X Directory Services v10.5 Exam

1. As an Apple Certified System Administrator in Apple Company. Your company has a Mac OS X Server v10.5 computer. One Mac OS X v10.5 computer client is bound to an Open Directory master. How does the client obtain the mapping of standard Directory Service attributes to native LDAP attributes?

A. It uses mapping information provided in DHCP Option 95.

B. It performs an LDAP query on the Open Directory master, searching for a record named "macosxodconfig" which contains the mapping.

C. It performs a series of LDAP queries on the Open Directory master and reviews the whole directory tree, then builds the mapping based on the object classes it finds.

D. It performs an LDAP query on the Open Directory master, searching for a record named "macosxodschema" which contains the schema. The client builds the mapping from the schema.

Answer: B

2. In a default installation of Mac OS X v10.5, which command should you enter in Terminal to search for a user named "kim" in all directory domains in your search path?

A. `dscl localhost read /Search/Users/kim`

B. `dscl localhost read /Default/Users/kim`

C. `dscl localhost read /127.0.0.1/Users/kim`

D. `dscl localhost read /Local/Default/Users/kim`

Answer: A

3. As an Apple Certified System Administrator in Apple Company. Your company has a Mac OS X Server v10.5 computer, how to enable or disable debug logging for the DirectoryService process?

A. You should enter the command `killall -USR1 DirectoryService` in Terminal.

B. You should select Detailed Logging in the Open Directory service pane in Server Admin,

C. You should enter the command `defaults write com.apple.DirectoryService LogLevel debug` in Terminal.

D. You should enter the command `serveradmin settings dirserv.loggingAttributes:logLevel = "debug"` in Terminal.

Answer: A

4. As an Apple Certified System Administrator in Apple Company. Your company has a Mac OS X Server v10.5 computer. Please point out which type of entry in an LDAP schema defines the record type(s) that the LDAP directory supports?

- A. OID base
- B. object class
- C. syntax definition
- D. attribute definition

Answer: B

5. As an Apple Certified System Administrator in Apple Company. Your company has a Mac OS X Server v10.5 computer. You want a Mac OS X v10.5 computer to mount a network volume dynamically over AFP when users log in to the computer. Which TWO attributes must be defined in the mount record?

- A. You should define the attribute Export
- B. You should define the attribute MountDir
- C. You should define the attribute VFSSOpts
- D. You should define the attribute VFSType

Answer: CD

6. A search base for an LDAP request describes the location in the LDAP hierarchy where the search will begin.

- A. TRUE
- B. FALS

Answer: A

7. In Mac OS X v10.5, which command should you enter in Terminal to send a HUP signal to a process?

- A. sig
- B. kill
- C. stop
- D. signal

Answer: B

8. As an Apple Certified System Administrator in Apple Company. Your company has a Mac OS X Server v10.5 computer. You want to add a user to an Open Directory master. What should you do to achieve it without stopping the DirectoryService process to avoid data corruption?

- A. You should use command-line tool dscl
- B. You should use command-line tool slapadd
- C. You should use command-line tool slapconfig
- D. You should use command-line tool slappasswd

Answer: A

9. As an Apple Certified System Administrator in Apple Company. Your company has a Mac OS X Server v10.5 computer. You are configuring a Mac OS X Server v10.5 computer to search multiple directory domains. How to specify the order in which the server searches the directories when authenticating users?

- A. You should define a custom search path in the Authentication pane of Directory Utility.
- B. You should run slapconfig -setauthmechanisms and specify the directory domain search order.
- C. You should modify the mapping for the AuthenticationAuthority attribute in the Mappings pane of Directory Utility.
- D. You should configure the computer account and enter the authentication search path in the Advanced pane of Workgroup Manager.

Answer: A

10. As an Apple Certified System Administrator in Apple Company. Your company has a Mac OS X Server v10.5 computer. You want to make an OpenLDAP server to support AFP network user logins from Mac OS X v10.5 computers. Which Open Directory attribute must you add to the OpenLDAP schema, and in what format is the

attribute's value stored?

- A. A UserHome attribute with a value containing a UNC for the AFP server share point
- B. An ExportDirectory attribute with a value containing a URL for the AFP server share point
- C. A Mount attribute with a value containing a UNC description of the AFP server share point
- D. A HomeDirectory attribute with a value containing an XML description of the AFP server share point

Answer: D

11. A search base for an LDAP request describes the directory services data types that correspond to the LDAP entry being searched

- A. TRUE
- B. FALS

Answer: B

12. A search base for an LDAP request describes the client application making the search request

- A. TRUE
- B. FALS

Answer: B

13. As an Apple Certified System Administrator in Apple Company. Your company has a Mac OS X Server v10.5 computer. Where in the Mac OS X v10.5 file system are user accounts for the /Local/Default directory domain stored?

- A. /var/db/netinfo/local.nidb
- B. /etc/openldap/Local/Default
- C. /var/db/mysql/dslocal/Default
- D. /var/db/dslocal/nodes/Default/users/

Answer: D

14. As an Apple Certified System Administrator in Apple Company. Your company has a Mac OS X Server v10.5 computer. GeneratedUIDs provide for user identification in which TWO contexts?

- A. file ACLs
- B. file ownership
- C. password policies
- D. group membership

Answer: AD

15. As an Apple Certified System Administrator in Apple Company. Your company has a Mac OS X Server v10.5 computer. There is one Open Directory master with many replicas. But it fails to work fine. How should you promote one of the replicas to master and have all the other replicas look to the new master?

- A. You should use Server Admin to change one of the Open Directory replicas to a master, and then change all of the remaining Open Directory replicas to standalone servers, and back to replicas.
- B. You should use dsconfigldap to change one of the Open Directory replicas to a master, and then use Server Admin to change all of the remaining Open Directory replicas to standalone servers, and back to replicas.
- C. You should use Server Admin to change one of the Open Directory replicas to a master, and then change the address of the Open Directory master on all of the remaining replicas, without changing the role of the replicas.
- D. You should use dscl to change one of the Open Directory replicas to a master, and then use serveradmin to change the address of the Open Directory master on all of the replicas, without changing the role of the replicas.

Answer: A

16. Which statement describes a standard attribute in Mac OS X v10.5 directory services?

- A. An attribute defined by RFC2307
- B. An attribute required by Mac OS X v10.5 to publish services with Bonjour
- C. An attribute required by Open Directory to support network logins in Mac OS X v10.5
- D. An attribute in an Open Directory record that includes default mappings to one or more native attributes in a local or connected directory

Answer: D

17. A Mac OS X v10.5 computer is bound to an Active Directory server using the Active Directory plug-in in Directory Access. Using the default configuration of the plug-in, what is the Mac OS X user ID number for a user account provided by the Active Directory server?

- A. The user ID number is always set to 500.
- B. The user ID number is the value stored in the user account's UID attribute.
- C. The user ID number is generated based on the user account's Globally Unique ID (GUID).
- D. The user ID number is a randomly generated value that does not conflict with any user IDs used by the local user records.

Answer: C

18. Which attribute in a Mac OS X network user account stores the network location of the user's home folder?

- A. The UserHome attribute in the mount record
- B. The VFSLinkDir attribute in the mount record
- C. The ExportDirectory attribute in the computer record
- D. The HomeDirectory attribute in the user account record

Answer: D

19. As an Apple Certified System Administrator in Apple Company. Your company has a Mac OS X Server v10.5 computer. When a Kerberos client authenticates with a kerberized service, how does the kerberized service determine that the client has a service ticket from an authentic KDC?

- A. If the service ticket is signed with the KDC's public key.
- B. If the service ticket is signed with the user's private key.
- C. If the service ticket is encrypted with the service's public key.
- D. If the service ticket is encrypted with the service's private key.

Answer: D

20. A search base for an LDAP request describes the network path to the LDAP server that the request will search

- A. TRUE
- B. FALSE

Answer: B
